Table 3. Estimated time required for each stage of the

cycle.

Stage	Procedure	Time Required (hrs)	Description	Notes
1	Screening of materials	80	Screening of all materials and evaluation for potential hazards. This includes reviewing of material safety data sheets and identification of hazards based on this information.	
2	Sample preparation	20	Preparation of samples for testing, including grinding, mixing, and preparing test specimens.	
3	Test method development	40	Development of test methods to evaluate the materials. This may involve several iterations and refinement of the methods.	
4	Initial testing	150	Initial testing of materials using the developed test methods. This may include testing multiple batches of materials.	
5	Data analysis and reporting	20	Data analysis and reporting of initial test results. This includes preparation of reports and presentation of findings to management.	
6	Final testing	150	Final testing of materials using the developed test methods. This may include testing multiple batches of materials.	
7	Data analysis and reporting	20	Data analysis and reporting of final test results. This includes preparation of reports and presentation of findings to management.	
8	Follow-up testing	100	Follow-up testing of materials using the developed test methods. This may include testing multiple batches of materials.	
9	Data analysis and reporting	20	Data analysis and reporting of follow-up test results. This includes preparation of reports and presentation of findings to management.	
10	Final report	10	Final report summarizing the results of the study, including recommendations for future work.
